How to deploy React App to GitHub Pages

#javascript #react #github #webdev

How to deploy React App to GitHub Pages

Did you build React app and want to deploy it, following these simple steps you able to deploy and showing the world your amazing app.

I will show how to create and deploy React App using [create-react-app](#) and [GitHub Pages](#)

Prerequisites :

- [GitHub](#) Account.
- Install [Git](#) in your machine and [Set up Git](#).

Make sure you have Node.js and Npm installed in your machine.

- Install [Node.js](#)
- Install [Npm](#)

Notice You'll need to have Node 8.10.0 or later on your local machine.

Procedure :

1- First create a repository named `my-app` using [create-react-app](#).

```
npm init react-app my-app
```

2- We need to install [GitHub Pages](#) package as a dev-dependency.

```
cd my-app  
npm install gh-pages --save-dev
```

3- Add properties to `package.json` file.

The first property we need to add at the top level `homepage` second we will define this as a string and the value will be "`http://{username}.github.io/{repo-name}`" `{username}` is your GitHub username, and `{repo-name}` is the name of the GitHub repository you created it will look like this :

```
"homepage": "http://yuribenjamin.github.io/my-app"
```

Second in the existing `scripts` property we to need to add `predeploy` and `deploy`.

```
"scripts": {  
//...  
}
```

```
"predeploy": "npm run build",
"deploy": "gh-pages -d build"
}
```

```
  "homepage": "http://yuribenjamin.github.io/my-app",
  "name": "my-app",
  "version": "0.1.0",
  "private": true,
  "dependencies": {
    "react": "^16.8.6",
    "react-dom": "^16.8.6",
    "react-scripts": "3.0.1"
  },
  "scripts": {
    "predeploy": "npm run build",
    "deploy": "gh-pages -d build",
    "start": "react-scripts start",
    "build": "react-scripts build",
    "test": "react-scripts test",
    "eject": "react-scripts eject"
  },
  "eslintConfig": {
    "extends": "react-app"
  },
  "browserslist": {
    "production": [
      ">0.2%",
      "not dead",
      "not op_mini all"
    ],
    "development": [
      "last 1 chrome version",
      "last 1 firefox version",
      "last 1 safari version"
    ]
  },
  "devDependencies": {
    "gh-pages": "^2.0.1"
  }
}

"package.json" 37L, 788C
```

37,1

All

4- Create a Github repository and initialize it and add it as a remote in your local git repository.

Now, create a remote GitHub repository with your app name and go back initialize this

```
git init
```

```
add it as remote
```

```
git remote add origin git@github.com:Yuribenjamin/my-app.git
```

5- Now deploy it to GitHub Pages.

just run the following command :

```
npm run deploy
```

```
ibrahim@Yuri:~/projects/my-app$ npm run deploy
> my-app@0.1.0 predeploy /home/ibrahim/projects/my-app
> npm run build

> my-app@0.1.0 build /home/ibrahim/projects/my-app
> react-scripts build

Creating an optimized production build...
Compiled successfully.

File sizes after gzip:

 36.44 KB  build/static/js/2.b41502e9.chunk.js
 768 B     build/static/js/runtime~main.6019dd84.js
 601 B     build/static/js/main.41e591c4.chunk.js
 517 B     build/static/css/main.2cce8147.chunk.css

The project was built assuming it is hosted at /my-app/.
You can control this with the homepage field in your package.json.

The build folder is ready to be deployed.
To publish it at http://yuribenjamin.github.io/my-app , run:

  yarn run deploy

Find out more about deployment here:
  https://bit.ly/CRA-deploy

> my-app@0.1.0 deploy /home/ibrahim/projects/my-app
> gh-pages -d build

Published
```

this command will create a branch named `gh-pages` this branch host your app, and `homepage` property you created in `package.json` file hold your link for a live preview, or you can open the branch setting scroll down to GitHub Pages section you will find this:

[Visit deployed app](#)

6- commit and push your commit to GitHub. *Optionally*

```
git add .  
git commit -m "Your awesome message"  
git push origin master
```

Recap

We created React App using `create-react-app`
then we installed `gh-pages` as a dev-dependency
and in `package.json` file we added some properties `homepage` also in existing `scripts` property we added `predeploy` and `deploy`
and created a remote repository and initialize it
and run `npm run deploy` to generate a production build and deploy it to GitHub Pages.

if you have any questions, please don't hesitate to ask.
Always happy to hear from you.

react-app github pages Fix bug ; routing

Discussion (241)

trishabernice • Jun 15 '20

...

Hi! Thanks for the tutorial!

I accidentally copy pasted this on my terminal : git remote add origin

git@github.com:Yuribenjamin/my-app.git

and now i keep getting this:

Cloning into 'node_modules/gh-pages/.cache/git@github.com!Yuribenjamin!my-app.git'...

git@github.com: Permission denied (publickey).

fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

npm ERR! code ELIFECYCLE

npm ERR! errno 1

npm ERR! [my-app@0.1.0](#) deploy: gh-pages -d build

npm ERR! Exit status 1

npm ERR!

npm ERR! Failed at the [my-app@0.1.0](#) deploy script.

npm ERR! This is probably not a problem with npm. There is likely additional logging output above.

npm ERR! A complete log of this run can be found in:

npm ERR! /Users/TrishaBernice/.npm/_logs/2020-06-15T16_41_28_880Z-debug.log

I tried git remote rm origin and it still won't work. can you please advice me on what i should do here? I will really appreciate it!

Ibrahim Ragab • Jun 15 '20

...

No problem

git remote -v

Will display origin and the wrong remote url

To delete it

git remote rm origin

Then check again

git remote -v

Will display nothing time to add the right one

Happy Hacking

trishabernice • Jun 15 '20

...

Hi Ibrahim, Thanks for the fast reply!

I did this:

```
Trishas-MBP-2:src TrishaBernice$ git remote rm origin  
Trishas-MBP-2:src TrishaBernice$ git remote -v  
Trishas-MBP-2:src TrishaBernice$ git remote add origin  
git@github.com:trishabernice/portfolio.git  
Trishas-MBP-2:src TrishaBernice$ npm run deploy
```

and I still got this...

```
Cloning into 'node_modules/gh-pages/.cache/git@github.com!Yuribenjamin!my-app.git'...  
git@github.com: Permission denied (publickey).  
fatal: Could not read from remote repository.
```

Please make sure you have the correct access rights
and the repository exists.

```
npm ERR! code ELIFECYCLE  
npm ERR! errno 1  
npm ERR! my-app@0.1.0 deploy: gh-pages -d build  
npm ERR! Exit status 1  
npm ERR!  
npm ERR! Failed at the my-app@0.1.0 deploy script.  
npm ERR! This is probably not a problem with npm. There is likely additional logging  
output above.
```

npm ERR! A complete log of this run can be found in:

```
npm ERR! /Users/TrishaBernice/.npm/_logs/2020-06-15T17_01_16_913Z-debug.log
```

Is there anything else I can try to fix the issue?

Ibrahim Ragab • Jun 15 '20

...

Use http or ssh

trishabernice • Jun 15 '20

...

Earlier I did this:

```
Trishas-MBP-2:src TrishaBernice$ git remote add origin  

```

and i did git remote rm origin and then added the one for ssh and I still got the same error.

trishabernice • Jun 15 '20

Do you have any suggestions for what I can do? I'll really appreciate it!

mejimaru • Jun 23 '20 • Edited on Jun 23

1. go to github.com and create Repositories => your-app
2. create your personal access token github.com/settings/tokens
3. git remote set-url origin username:yourtoken@github.com/user...
4. npm run deploy

or

1. yarn add gh-pages
2. yarn deploy

Sherazzie • Jul 7 '20

mejimaru's solution worked if anyone ran into the error that @trishabernicer faced.

Thanks [@mejimaru](#)

Lathryx • Feb 16 '21

In response to [@trishabernice](#)'s problem with `node_modules/.cache/gh-pages`, a fix with this for me was to simply remove/delete `node_modules/.cache/gh-pages`, then execute `npm run deploy` once more.

This issue I'm referring to (and its answer) can be found on StackOverflow here:
[stack overflow .com/questions/639645...](https://stackoverflow.com/questions/639645...)

Jesús Sánchez • Aug 11 '20 • Edited on Aug 11

I'd the same problem and then read a lot of blogs/articles I find the solution. I'd changed the git in my `PATH` in this question you can find the [solution](#) then open the a new terminal

and run the command `npm run deploy` I hope this help you.

Regards.

Vicent García • Jun 10 '20 • Edited on Jun 10

...

Very interesting tutorial Ibrahim!

I have a question: how do you update the production build?

I mean: after deploying the app on GitHub, I realized that I need to change some stuffs. So I have generated new commits. If my app points to the master branch, how can I reflect that new changes on the production build then?

Thanks

Ibrahim Ragab ★ • Jun 10 '20

...

Make changes commit then deploy again, that's it

Vicent García • Jun 10 '20

...

Ok! Thanks!

Ibrahim Ragab ★ • Jun 10 '20

...

If you want to updating the release check

create-react-app.dev/docs/updating...

Vicent García • Jun 10 '20

...

Perfect!

Thanks!

Firzatullah Dwiko Ramadhan • Aug 11 '20

...

so i commit and push to my origin/github master, then i run "npm run deploy" again?

 Curious React Web Developer • Dec 12 '20 

yes

 Curious React Web Developer • Dec 12 '20 

just write a command like below -
npm run deploy

 Idong Essien • May 17 '20 

>Hello ! This was a big help ! However, at step 5, I received this error:

"Cloning into 'node_modules/gh-pages/.cache/[git@github.com](https://github.com)!idongessien!idngessnio.git'...
Warning: Permanently added the RSA host key for IP address '140.82.114.4' to the list of known hosts.
[git@github.com](https://github.com): Permission denied (publickey).
fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

```
npm ERR! code ELIFECYCLE
npm ERR! errno 1
npm ERR! idngessnio@0.1.0 deploy: gh-pages -d build
npm ERR! Exit status 1
npm ERR!
npm ERR! Failed at the idngessnio@0.1.0 deploy script.
npm ERR! This is probably not a problem with npm. There is likely additional logging output above.
```

npm ERR! A complete log of this run can be found in:

 Kokil Gupta • Jan 12 '21 

Hey I'm getting the same error. Did you resolve it?

Ibrahim Ragab ⚡ • May 17 '20

Setup ssh key bro

...

Idong Essien • May 17 '20

...

Forgive me but how do I do that ? I am a newbie here

Ibrahim Ragab ⚡ • May 17 '20

...

Check this help.github.com/en/enterprise/2.15...

DigitalEmma • Aug 16 '19

...

found this post useful, thank you...I have a question, after i have pushed my react app to github page, when i visit the url it displays blank with no error message shown, any pointers why i'm seeing this happen/
plus this is my first project in react.

Thank you

Piruthuvi • Apr 25 '20

...

I got this same problem in the beginning. If you follow this tutorial correctly,then try this one.

Your home page route should be like this

```
<Route exact path="/your github repo name">
```

instead for

and in your rendered component change the

```
<Link to="/your github repo name">
```

instead for

```
<Link to="/">
```

And another important point you should consider. your github repo name must be valid name for example dots or space should not be in your repo name because that things conflict with URL.

Learn-Deepak • Aug 2 '20

...

Thanks a lot @Piruthuvi.

Rajat Sawarkar • Oct 5 '20

...

this should be mentioned in the create-react-app docs, was so frustrated because of this simple code change, thanks alot mate @Piruthuvi

Ibrahim Ragab ⭐ • Aug 16 '19

...

Thanks, double check your process, if the same error occurred please share with me your github repo and I will help immediately

Nidhi pal • Nov 27 '21

...

Hey, thanks for this very helpful tutorial. I am also getting a blank page. I did what was suggested (changing the router and link path as the github repo name) but still its not resolved.

repo link - github.com/Nidhipal09/covid-19-project

websited - nidhipal09.github.io/covid-19-project

can you pls help

Ana Beatriz • Nov 19 '21

...

I did the changes but a blank page is displayed yet.

Katerina Pidan • Mar 18 '20

...

Hello, Ibrahim.

I have such problem:

fatal: A branch named 'gh-pages' already exists.

npm ERR! code ELIFECYCLE

npm ERR! errno 1

npm ERR! [movie@0.1.0](#) deploy: gh-pages -d build

npm ERR! Exit status 1

npm ERR!

npm ERR! Failed at the [movie@0.1.0](#) deploy script.

npm ERR! This is probably not a problem with npm. There is likely additional logging output above.

Can you help me? Here is my repo github.com/pitysek16/Movies-React-app

Ibrahim Ragab ⭐ • Mar 18 '20

...

hii katerina check last commit in this repo
github.com/Yuribenjamin/Movies-Rea...
and already your app running
yuribenjamin.github.io/Movies-Reac...
if you fix this tell me to delete repo above.

Katerina Pidan • Mar 18 '20

Thank you! It is work

Esobelsaac • May 10 '21

Please how where you able to fix that, I'm having same issue here

Bukti Siregar • Oct 8 '20

hi sir, i am experiencing the same error. can you please show me how to fix it?
thank you in advance

solicks • May 24 '20

Please what did you do to resolve it. I'm having the same issue.

Simin Maleki • May 30 '20

when you receive error " A branch named 'gh-pages' already exists.", you have to
delete the .config sub-folder in gh-pages folder in node_module.

Zac Taylor • Oct 6 '19

Hey Ibrahim, my app won't deploy. I went over your instruction twice but am still having
issues. Would you mind taking a look at my repo, it's github.com/ZacASTaylor/zacastaylor....
Thanks!

...

 Ibrahim Ragab • Oct 6 '19

Hello Zac

you did well but you need to make some changes to make your project run online kindly follow this process carefully:

1 - you need to change repo name because of dots in repo name conflict with URL, zacastaylor it's good enough and works with me.

2- in package.json change homepage with new value should be
["zacastaylor.github.io/zacastaylor"](https://zacastaylor.github.io/zacastaylor)

2.1- change predeploy to the new value "npm run build", yarn is fine but it's not tested.

3- in App.js change line 25 to be <Route exact path='/zacastaylor'

4- in component => layout => Header.js line 37 to be <Link to="/zacastaylor"

download the project and change the repo name, after that remove the old connection you can check `git remote -v` you will see this connected with old repo remove connection by `git remote rm` this command will take one parameter the full command will be `git remote rm origin`.

if you check again `git remote -v` will display nothing to your terminal after that do the change above and make a commit with new changes then push and run `npm run deploy`.

happy to hear from you Zac, kindly update me if this process success or fail

...

 Zac Taylor • Oct 6 '19

Thanks so much for your help Ibrahim, but the issue was that I needed slightly different instructions because I am trying to have my React app hosted on my GitHub user page and not a project page. I followed the instructions here: dev.to/javascripterika/deploy-a-react-app-to-github-pages-2a1f

Thanks again!

 Isaac Pak • Apr 6 '20

X video is private...

...

 Kimberly Bone • Jan 14 '20

X How would I add changes (such as changing the header, font, color, etc) to the page after deploying? I committed and pushed and it successfully shows on my github repo but when I go to my live link none of my changes show.

My repo: github.com/kimberlybone/my-portfolio...My live site: kimberlybone.github.io/my-portfolio...

...

 Ibrahim Ragab ⚡ • Jan 14 '20

X did you try to delete GH-page branch && build directory, and deploying the app again? if not try this

...

 Ligita Montvilaite • Apr 24 '20

X Hey - does this mean, everytime you update something on the page, we need to Delete Gh-page branch && delete build directory folder, and basically deploy again?

Is there no automatic update happening? (i.e. like, when deployed on netlify or smhtg.) ? Thanks!

...

 Ibrahim Ragab ⚡ • Apr 27 '20to update run `npm run deploy` after each update

...

 Omer • Jul 31 '20

as you said committing and deploying works fine but you have to wait for the change to take an effect on the live link (and sometimes the repo itself)

...

 jaykeeshow • Feb 22 '21

Very nice post Ibrahim. Really helped me.
I was able to deploy my page to gh pages. The only thing is that my background image is not loading.
I have the image in my src folder. While running the app on my local server, The site was displaying my image perfectly. While i deploy on gh pages, image disappears.
I have tried adding the image using jsx, but to no avail. Previously i imported the image to my scss. Thought that was the problem.
Can someone tell me what's going on?
app is deployed here- jaykeeshow.github.io/simple-app/

Ibrahim Ragab ⚡ • Feb 23 '21

...

Thanks buddy, I see your image doesn't load i saw the build file in your code, try to build and run build locally before you deployed it and check why the image didn't appear

jaykeeshow • Feb 23 '21

...

dear ibrahim, i dont know how to run build locally. when i run- npm install -g serve, I get an error.

```
npm WARN checkPermissions Missing write access to /usr/local/lib/node_modules

```

Dani Amsalem • Sep 1 '21

I ran into a similar issue where my images weren't loading. After running `npm run build` and `npx run serve` and some other commands, I found that my images were looking for the path I set in step #3, setting a homepage value.

By adding the slug of my repo `/my-repo` to the beginning of my image relative path, I was able to see my images on my local build. Then running `npm run deploy`, I pushed it all back up to Github and my images showed up as intended.

Leah • Apr 16 '20

Hi. I am having issues deploying my React app to github pages. Could you take a look?
github.com/LKian/ToDoList

I added homepage to package.json, along with
"predeploy": "npm run build",
"deploy": "gh-pages -d build"

I added the gh-pages as a dev dependency

The error seems to occur when I run "npm run deploy"

```
todolist@0.1.0 build /mnt/c/Users/Admin/Desktop/Code/todolist
react-scripts build
```

```
internal/modules/cjs/loader.js:638
throw err;
^
```

```
Error: Cannot find module 'react-dev-utils/crossSpawn'
at Function.Module._resolveFilename (internal/modules/cjs/loader.js:636:15)
at Function.Module._load (internal/modules/cjs/loader.js:562:25)
```

.

.

.

.

.

Thank you!

Ibrahim Ragab ⚡ • Apr 16 '20 • Edited on Apr 16

...

hello Leah

give it try again I cloned your repo and walked through my tutorial,
and everything working fine with me check ...

dev-to-uploads.s3.amazonaws.com/i/...

dev-to-uploads.s3.amazonaws.com/i/...

dev-to-uploads.s3.amazonaws.com/i/...

...

Leah • Apr 16 '20 • Edited on Apr 16

...

Oh thanks for the screenshots. The only difference I noticed was that for some reason even though I installed "gh-pages" yesterday, it wasn't there. I re-installed and gh-pages now appears in package.json.

I then tried to npm run deploy and am still getting an error. Any other thoughts as to what is wrong?

Creating an optimized production build...

Failed to compile.

`./src/index.js`

Error: [BABEL] /mnt/c/Users/Admin/Desktop/Code/todolist/src/index.js: Cannot find module '@babel/core' (While processing:

`"/mnt/c/Users/Admin/Desktop/Code/todolist/node_modules/babel-preset-react-app/index.js"`

I read that the gh-pages is supposed to create a new branch but that is not happening. I'm going to try to delete the repo and start from scratch. After I make a new repo, should I still be running the following setup commands?

`git init`

`git add README.md`

`git commit -m "first commit"`

```
git remote add origin git@github.com:LKian/ToDoList.git
git push -u origin master
```

and THEN running npm run deploy? Still getting an error

Update: I deleted node_modules and package-lock.json and npm installed again. And it says published!!!!!!! Still not showing up on the live page but I know sometimes it takes a while. Will keep you updated :-)

<Ikian.github.io/ToDoList/index.html>

Got it. Apparently you have to add "/index.html" to the path

Ibrahim Ragab • Apr 16 '20

...

no, just the URL that equal to the home page key in the package.json

<Ikian.github.io/ToDoList>

[dev-to-uploads.s3.amazonaws.com/i/...](dev-to-uploads.s3.amazonaws.com/i/)

Alex • Feb 1 '20

...

Great article. I got it to work publishing the react app. Note that for the homepage I used "https" rather than "http". Also since I used yarn for my packages I tried to use it for the deploy as well, but it didn't work. I got it to work with npm however. Thanks again.

ItsGiovanni • Nov 21 '19 • Edited on Nov 21

...

Lovely. Thank you for this.

If you're having the following error:

Host key verification failed.

fatal: Could not read from remote repository.

Remove your remote:

git remote remove origin

Then create a new remote. no marks:

git remote add ht <https://github.com/username/repo-name.git>

Using the git@github.com... syntax ends up using SSH to clone, and inside the container, your private key is not available.

Raihan • Jun 15 '21

Created this account just for thanking you, mine says invalid url all the time. Tried changing the homepage, reinstalling the package, removing the ssh remote, and even switching the node version lol. Thanks, your solution works.

tianyiz8 • Mar 25 '20 • Edited on Mar 25

Hello, i am doing the routing for my website, but only the landing page shows up. Could you have a look? I think the problem should be in index.js, main.js, App.js. Thanks!!

tianyiz8.github.io/personal-website/
github.com/tianyiz8/personal-website

Ibrahim Ragab ★ • Mar 25 '20

Hey thanks for your comment, handling route in react can easily be done by using react router package, not by default way as I saw in your app, also read about Single Page App, and declarative programming

github.com/ReactTraining/react-router

Happy Hacking!

tianyiz8 • Mar 25 '20

Hello! Could you be more specific? I did use react-router-dom, and where are declarative programming and Single Page App? I still have no idea how to make it work. Thanks!

Ibrahim Ragab ★ • Mar 25 '20

if so then why you declare a tag to route check

reacttraining.com/react-router/web...

...

 Akanksha priya • May 21 '20

 Hélène Martin • Mar 30 '21

Hello Ibrahim, thanks for the tutorial.. a question.. I pushed my commit to a master branch before pushing to a remote.. How do I get on further? Do I have to do git checkout -b gh-pages? please let me know. Thanks in advance.. warm regards :)

...

 Ibrahim Ragab ⚡ • Mar 30 '21

Just git push

Hélène Martin • Mar 30 '21

thanks but when ? I created a main page before a gh-pages what do I do? Do I create a gh-page on command line? sorry if it is a stupid question

Ibrahim Ragab ★ • Mar 30 '21

I don't get it!

But delete all branches remote and local

You now has a master branch commit your work and deploy it again

Hélène Martin • Mar 30 '21

Sorry forgot about it

pniebrzydowski • May 25 '20

In case anyone else runs into the same issue that I had. When running the build command for the first time, I got error:

fatal: ambiguous argument 'HEAD': unknown revision or path not in the working tree.

Creating a new branch `gh-pages` manually before running the deploy fixed this.

Marissa • May 6 '20 • Edited on May 6

Hello, Ibrahim! Thank you for your tutorial. I was just wondering what changes would be necessary if I wanted to deploy the react app directly to the homepage (eg.: username.github.io), if that's even possible.

Ibrahim Ragab ★ • May 6 '20

Hey Marissa, yea check this dev.to/yuribenjamin/how-to-deploy-react-app-in-github-pages-2a1f
Happy hacking!

Chris Joshua • Jun 20 '20

What is wrong with mine, i do set up the ssh key. but i still got this error.

Cloning into 'node_modules\gh-pages.cache\git@github.com!DevChrisDev!ChrisJoshuaManuel.git'...
git@github.com: Permission denied (publickey).
fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

```
npm ERR! code ELIFECYCLE
npm ERR! errno 1
npm ERR! chris-resume@0.1.0 deploy: gh-pages -d build
npm ERR! Exit status 1
npm ERR!
npm ERR! Failed at the chris-resume@0.1.0 deploy script.
npm ERR! This is probably not a problem with npm. There is likely additional logging output
above.
```

npm ERR! A complete log of this run can be found in:

```

debug.log
```

all help would be much appreciated.

Christopher James Dent • Jun 23 '21

...

Just wanted to add my thanks for this guide, it's the best one I've seen and I reference it whenever I'm deploying a React app! Plus your follow up to people's questions below have gotten me out of a few sticky situations. Thank you very much!

ian1202 • Jan 24 '20

...

Hi Ibrahim, I have recently built my first react project. Despite having followed all your instructions on the thread, my app won't deploy. Would appreciate it if you could take a look at it for me:

ian1202.github.io/react-project/

Thank you!

Ibrahim Ragab ★ • Jan 24 '20 • Edited on Jan 24

...

Not all the instruction I think, do this changes to package.json, change homepage to homepage and add the right value "http://{username}.github.io/{repo-name}" . Solved

ian1202 • Jan 24 '20

...

It worked! Sorry for having missed that detail. Thank you!

Ibrahim Ragab ★ • Jan 24 '20

...

Your are welcome, Alawys happy to help 😊

erfanmashari • Oct 27 '21

...

hello and thanks for tutorial

i have problem when i run deploy and i get this error and it's not published

Creating an optimized production build...

Compiled successfully.

File sizes after gzip:

41.33 KB build\static\js\2.be6fabde.chunk.js

1.62 KB build\static\js\3.335c5c5e.chunk.js

1.18 KB build\static\js\runtime-main.81677a80.js

588 B build\static\js\main.d0ad4d5b.chunk.js

556 B build\static\css\main.a617e044.chunk.css

The project was built assuming it is hosted at /erfanmashari/digikala.git/.

You can control this with the homepage field in your package.json.

The build folder is ready to be deployed.

Find out more about deployment here:

cra.link/deployment

```
digikala@0.1.0 deploy D:\Programming\Projcts\digikala
gh-pages -d build
```

fatal: A branch named 'gh-pages' already exists.

npm ERR! code ELIFECYCLE

npm ERR! errno 1

npm ERR! [digikala@0.1.0](#) deploy: gh-pages -d build

npm ERR! Exit status 1

npm ERR!

npm ERR! Failed at the [digikala@0.1.0](#) deploy script.

npm ERR! This is probably not a problem with npm. There is likely additional logging output above.

npm ERR! A complete log of this run can be found in:

npm ERR! C:\Users\ghaem\AppData\Roaming\npm-cache_logs\2021-10-

27T09_58_01_094Z-debug.log

what should i do?

my repo url: github.com/erfanmashari/digikala

Safin Ghoghabori • Oct 25 '21

...

Thank you so much for this much easy to follow explanation.

However i have one question to ask that is after deploying my portfolio site i got url something like `username.github.io/dir-name` but i want my portfolio website name something like this `username.github.io`, so how can i do this? Plesae let me know.

Eaindra Wun Pyae • Feb 3 '20

...

Hello Ibrahim, my app deploys now, but it is showing only HTML plain webpage. Would you mind looking at my Github repo, and guide me any necessary changes to my project?

github.com/eaindra-wp/portfolio

Ibrahim Ragab ⚡ • Feb 3 '20

...

hey Eaindra can you make master is the default, not Github pages to be able to clone your repo.

and put "homepage": "xyz....", at the top of your module
and check console errors, make sure console is free!

...

 Eaindra Wun Pyae • Feb 3 '20

>Hello Ibrahim, I have updated the steps that you suggested, but it seems like my react-app cannot find the CSS files yet.

...

 Ana Beatriz • Nov 19 '21

I'm having the same issue.

...

 Irena Mishonova • Apr 6 '20

Helloooo :)

So, I am begginer... and I did what you "said"...and it worked... although I have two issues that I dont understand.

- that is supposed to be my project page - renkaaa.github.io/sweet-shop-project/ ... when u go is showing my 'not found page'... but when u click on the header parts, it is working - but with changed address - renkaaa.github.io/{home?store?login} ..etc..and it is only working the views... my node.js server is not exactly on there..
- also the other thing... after the deploying , i got that build folder.. and basically...all my files changed and i caouldnt working on the project..ldk how but I managed to return them and now I can work, but I am totally lost...

...

 Ibrahim Ragab ★ • Apr 6 '20

first issue check routing, second cuz you watch gh-branch change to master
happy hacking!

...

 Irena Mishonova • Apr 7 '20

Thanks a lot! On my way to check the stuff!!!

Keep safe from Covid!

...

 mjach • Dec 6 '19

I deployed my react app to GitHub and its working but not what I expected. When I run the app on the localhost its works perfectly and I can see all the pictures and all the navigation

works. After deploy on Github, I can not see anymore the images which were a relative path link to my app and also navigation back button seems not working. Any hints on how to overcome these issues. Here is react app Github deployed Link- Your site is published at mjachowdhury.github.io/mjacportfolio/

would you please look into this

Ibrahim Ragab ✨ • Dec 18 '19

...

hey mjach your problem-specifically in routing there's a difference between routing on dev server and the production double-check this point I know you can do it, and if not sadly contact me and I will fix this for you

Shivam Sharma • Apr 3 '20

...

Hi Ibrahim, First Thank you for a such a wonderful and helping blog.I have one doubt that i was able to successfully deploy my react app but when i make changes locally i am unable to get those changes on my react app. Can you please guide how to do that in a proper way?

Ibrahim Ragab ✨ • Apr 3 '20

...

Yeah make changes commit and run the deploy again to generate fresh build your terminal will tell you the rest,
Another way delete build delete gh branch make changes rub deploy
Happy Hacking

Lakindu Kariyawasam • Nov 13 '20 • Edited on Nov 13

...

Really important tutorial. Thank you!

There's an error when I try to install react-bootstrap to my app.

any suggestions on that?

Im very new to react.

Kriviears • Dec 18 '19 • Edited on Dec 18

...

I followed the instructions and got the same messages from the terminal up to right under the "gh-pages -d build" and then I get these lines

```
gh-pages -d build
```

```
bash: /dev/tty: No such device or address  
error: failed to execute prompt script (exit code 1)  
fatal: could not read Username for 'github.com:' Invalid argument
```

my repo is github.com/Kriviears/React-Portfolio

Ibrahim Ragab • Dec 18 '19

...

hey Kriviars, first you should fix all bugs before deploy, second check this repo this is your app running successfully, and double-check the fix commit after you fix this problem notify me to delete you repo = >
yuribenjamin.github.io/React-Portf...
github.com/Yuribenjamin/React-Port...

Bhargav Gohil • Oct 9 '20 • Edited on Oct 9

...

hey, Ibrahim I don't know where I am going wrong can you please check where is the issue
github.com/Bhargav252000/fakegram
the error I am getting

```
Cloning into 'C:\Users\BHARGAV\Desktop\React-Apps\fake-gram\node_modules\.cache\gh-pages\g:  
fatal: invalid branch name: init.defaultBranch =  
  
npm ERR! code ELIFECYCLE  
npm ERR! errno 1  
npm ERR! fake-gram@0.1.0 deploy: `gh-pages -d build`  
npm ERR! Exit status 1  
npm ERR!  
npm ERR! Failed at the fake-gram@0.1.0 deploy script.  
npm ERR! This is probably not a problem with npm. There is likely additional logging output  
  
npm ERR! A complete log of this run can be found in:  
npm ERR!     C:\Users\BHARGAV\AppData\Roaming\npm-cache\_logs\2020-10-09T13_30_51_074Z-debu
```

pauluzo • Nov 18 '19

>Hello Ibrahim. I followed your tutorial and I am trying to deploy my first app to github pages. I keep getting this error when I run "npm run deploy".

gh-pages -d build

Host key verification failed.

fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

Any help please?

Ibrahim Ragab ✨ • Dec 18 '19

...

make sure that you provide the right credentials

Andrii • Feb 18 '20

...

Hi, I have this error:

fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

Ibrahim Ragab ✨ • Feb 18 '20

...

can you provide your github repo

Andrii • Feb 18 '20

...

Sure: github.com/andrii1

I'm trying github pages here: github.com/andrii1/andrii1.github.io

Ibrahim Ragab ✨ • Feb 18 '20

...

in this tutorial, I introduced deploying react App to Github pages, I see your app didn't consume react packages, so you can deploy your app using the normal process by open settings navigate to GitHub Pages then in Source choose the master branch if you want run your app from the master branch.
happy hacking!

Andrii • Feb 18 '20

Sorry, can you specify a bit? I need to push it in separate repository inside /andrii1.github.io?

Ibrahim Ragab ★ • Feb 18 '20

what I need to say your app not a react app so you don't need this tutorial to deploy it to gihtub you can deploy it from the setting

Andrii • Feb 19 '20 • Edited on Feb 19

So, I have my React app in separate folder my-app, when I'm trying to upload it to GitHub, I see this:

dev-to-uploads.s3.amazonaws.com/i/...

Andrii • Feb 19 '20

Update: issue was solved with:
git push -f origin master

But, still andrii1.github.io/my-app is not live..
github.com/andrii1/my-app
